Title : Average size of drops in pulverizing liquid fuel with centrifugal atomizers

Periodical : Teploenerg., 9, 51-54, S 1955

Abstract : Authors report on experiments made with the distillation of liquid fuel and the calculation of volatility, liquid-vapor mixture, viscosity, etc. The theory of using the centrifugal atomizer, as expounded by G. N. Abramovich and I. I. Novikov, and the formula for the dimension of drops are presented. The testing installation is discussed in detail and a curve presents the fractional distillation of the liquid fuel. A mathematical analysis of the unstable fluctuations and the viscosity of the flow is presented. Three diagrams. Five Russian references, 1931-1955, 1 German, 1931.

PHASE I BOOK EXPLOITATION

1053

Voprosy aerodinamiki i teploperedachi v kotel'no-topochnykh protsesakh; sbornik statey (Aerodynamic and Heat Transfer Problems in Boiler and Furnace Processes; A Collection of Articles) Moscow, Gosenergoizdat, 1958. 329 p. 6,000 copies printed.

Ed. (title page): Knorre, G.F.; Ed. (inside book): Borishanskiy, V.M.; Tech. Ed.: Zabrodina, A.A.

PURPOSE: The book is intended for engineers and combustion specialists concerned with the design and operation of heating equipment and it is also for scientific workers and students of vtuzes.

COVERAGE: The book presents the results of complex investigations of flow conditions and heat transfer in boiler and furnace processes. The compilation consists of three parts which discuss the conditions of atomization and combustion of liquid fuel, some problems of heat transfer and flow in furnaces and boilers and, finally, the results of investigations of the flow and heat transfer in a

Card 1/7

Aerodynamic and Heat Transfer (Cont.) 1053

layer of crushed material. The articles in the first part present the fundamental principles for calculating the atomization process in injectors. Also, new data on the combustion of droplets of heavy liquid fuel are given which make it necessary to reconsider the accepted concept that vaporization of a liquid fuel always precedes its combustion. The reports of the second part throw light on the problem of the motion of a dusty air stream characteristic of cyclonic furnaces. This problem is extremely important in the design of such furnaces. The second part of the collection presents data necessary for the calculation of the emission of fly ash whereby it is shown that this emission is of great significance. In addition, the character of furnace temperature fields is analyzed. The articles of the third part present the fundamental laws of gas flow through a layer of fuel and give the theoretical principles necessary for calculating the aerodynamic resistance of the layer and the speed of drying in it. The data given in the collection accurately define current ideas regarding the characteristics of development of a number of phenomena which form the

Card 2/7

Aerodynamic and Heat Transfer (Cont.) 1053

heating process. Knowledge of these data will permit refining the calculation methods used in heating technology. The first part contains 2 Soviet references; the second part contains 8 Soviet, 3 English, and 1 German reference; and the third part contains 49 Soviet, 12 English, 7 German, 1 French, and 2 Japanese references.

AUTHOR: Kichko, V.D.

TITLE: Working Methods of First Stovemen N.I. Abramov and V.S. Korniyenko (Metody raboty starshikh gazovshchikov N.I. Abramova i V.S. Korniyenko)

PERIODICAL: Metallurg, 1958,³ No.1, pp. 13 - 14 (USSR).

ABSTRACT: The author describes the way in which the first stovemen of two shifts on a 1386-m² blast furnace at his works carry out their duties. The furnace is served by three stoves with a total heating area of 86 040 m² and was blown in in August, 1956. The workers and foremen of all shifts on this furnace act as a single team. On shift changing, Korniyenko warns Abramov of likely changes in the working of the furnace and points out any abnormality in the equipment, thus obviating the need for equipment inspection during shift changing. The same procedure is followed by Abramov handing over to Yu.P. Maydannik. The stoves are kept on air for 1.5 and on gas for 3 hours and the first stovemen ensure that the equipment is used correctly and is in good repair. Maximal dome temperature is 1 100 °C, that under the checkers being 300 °C. In addition to operating the stoves, Abramov and Korniyenko help the furnace operator, keeping themselves informed on operating conditions. If the peripheral gas temperature in the furnace

Working Methods of First Stovemen N.I. Abramov and V.S. Korniyenko

should deviate from the 800-850 °C range, they advise the operator to change the charging cycle. Other factors taken into consideration are the top-gas temperature and the radial distribution of carbon dioxide. Blast temperature is generally kept at 780-800 °C, thermal conditions in the furnace being controlled by blast-moisture alterations. Blast volume is also kept constant as far as possible, the moisture content being reduced to correct a too rapid descent of the charge. Tuyeres are kept clear. In four months of 1957, the following results have been achieved: over-production of pig iron, 6 911 tons, coke saving, 8 611 tons; time-off-blast 0.3% below planned value; iron cost reduction, 15 roubles per ton. The author attributes this partly to the adoption of competition between teams working furnaces under similar conditions, the use of charging-cycle variations to control furnace working, the liquidation of the marks system for evaluating shiftwork and the unification of shifts into a single-production team.

"Preliminary Seroepidemiologic Studies on Arboviruses in Selected Occupational Groups of the Healthy Population"

Warsaw, Przeglad Epidemiologiczny, Vol 20, No 3, 1966, pp 250-254.

Abstract: A serologic study using the hemagglutination test was carried out for arboviruses in the sera from 530 forestry workers and 464 agricultural workers from Lublin, Olsztyn, Bydgoszcz and Koszalin Wojewodstwas. The regional distribution of tick-borne encephalitis suggests there may exist natural foci of this infection.

Infračervené paprsky ve vojenství (Infrared Rays in Military Practice) Prague, Naše vojsko, 1959. 88 p. (Series: Knižnice moderní vojenské techniky, sv. 4) 1,500 copies printed. Transl. of Infračervené paprsky v vojenství. Moscow, Voenizdat, 1958.

Resp. Ed.: Arnošt Burget, Captain.

PURPOSE: This popular-type booklet is intended for military personnel.

COVERAGE: The booklet describes selected military uses of infrared light. Three main applications - infrared photography, thermal detectors, and night-vision devices - are discussed. The advantages, shortcomings, and uses of infrared photography are indicated, and photoelectric phenomena, photocells, various kinds of luminescence, a photoelectric igniter, night vision, electron-optical devices to convert the invisible image obtained by infrared rays into visible form, and black-out devices are described. The booklet was translated from the Russian edition by Miroslav Nolč, Engineer, Colonel, and Jan Šykora, Colonel; they also

*Zespół Strażesko-Morgagni-Adams-Stokes na tle rozkojarzenia przedsion-
kowo-komorowego zupełnego w chorobie reumatycznej. Strażesko-
Morgagni-Adams-Stokes syndrome as a sequence of
complete atrio-ventricular dissociation in rheumatic
fever ROCZNIK P.A.M. 1956, 2 (195-208) Graphs 6

Two cases of Morgagni-Adams-Stokes syndrome are described in patients suffer-
ing from rheumatic fever. In the first case total atrioventricular block alternated
with an atrioventricular block or with a sinus rhythm. In the course of the disease
disturbance of intraventricular conductivity and Wilson block of the right bundle
branch appeared. In the 2nd case complete heart block alternated with atrioven-
tricular block. From a pathogenetic viewpoint it is necessary to suppose (1) a
toxic influence not only on heart conductivity but also (2) changes of the vege-
tative centres in the diencephalon.

Warsaw, Polski Tygodnik Lekarski, Vol 17, No 51, 17 Dec 62, pp 1999-2001

Abstract: [Authors' English summary] A rare case of acute hemolytic anaemia in the course of cancer is reported. The patient was a man aged 73, with cancer of the larynx. Secondaries in the bone marrow and acute hemolytic anaemia with erythroleukemic reaction were stated one year after a ray therapy. The pathogenic relation between the primary neoplastic disease and hemolytic mechanism is discussed. Final references include 3 Polish, one Russian, one German, four French, and four English references.

"Pernicious Anemia Following Partial Gastric Resection. Report of Three Cases."

Warsaw-Krakow, Przegląd Lekarski, Vol 19, Ser II, No 7, 31 Jul 62, pp 316-318

Abstract: [Authors' English summary modified] Authors describe three cases of pernicious anaemia, 11, 12, and 13 years following partial gastric resection, with typical clinical and hematological symptoms of pernicious anaemia, in the first two cases without, and in the third case with symptoms of myelosis funicularis, later confirmed by examination of the marrow. Treatment with vitamin B₁₂ brought total remission of symptoms, normal red blood count, and - in the third case - regression of degeneration of funiculi. Authors discuss the characteristics, pathogenesis, and rarity of "gastric" pernicious anaemia. 24 refs: 1 Sov. 3 Polish. 1/1

"The Coagulohematogram in Cirrhosis of the Liver."

Warsaw-Krakow, Przegląd Lekarski, Vol 19, Ser II, No 2, 28 Feb 63, pp 143-147.

Abstract: [Authors' English summary modified] In an investigation of the value of the coagulohematogram in the evaluation of liver function tests in hepatic cirrhosis, determinations were made of activity of the prothrombin complex, fibrogen level, prothrombin, Factors V and X, complex of Factors VII and X, and thromboplastinogenesis test. It was found to be a sensitive index of liver function insufficiency, though only the determination of the prothrombin level by the two-stage method is of practical importance. The 37 references include about 3 Polish, 5, Russian, 10 German, and the rest Western sources.

"Effect of Prednisolone in Experimental Poisoning with Diphtheria Toxin in Guinea Pigs."

Warsaw, Przegląd Epidemiologiczny, Vol 19, No 2, 1965; pp 171-172.

Abstract: Study in 24 guinea pigs receiving lethal dose of diphtheria toxin, half being then treated with 2 mg /kg of prednisolone daily for 10 days, starting 1 hour after toxin administration, controls receiving 0.2 ml saline. Histopathological studies revealed much less severity of lesions in the treated animals as described in detail by organ; but there was no difference in mortality.
